Small, plastic details

When you want to tighten, loosen, fasten, plug or cover

When you need small plastic details, you'll find them here. We can be involved in the design process or help you find the detail you need. Dare to be creative.

Standard products

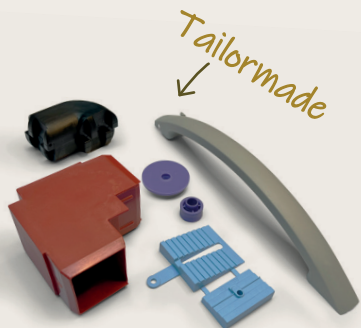

We have about 10 000 standard products! And most of them are manufactured in Lammhult, Sweden. You're welcome with your order regardless if it's a small or large quantity. All over Europe.

Customized standard products

This could be a solution if we have a standard product that almost fit. It can be about changing the color, material, or changing part of the tool. You can also add, for example, your logo or a pattern.

Completely tailor-made products

We have extensive knowledge within the company, but we also have collaborations with both designers and engineers when needed. From idea to reality, we support you through the process until the product is manufactured.

Easy to grip

Knobs

Not only are they functional but also easy to grip. Moreover, they are environmentally friendly as the screw is pressed into the material rather than casted. This manufacturing method allows for efficient recycling. We offer a diverse selection to meet specific needs and preferences.

Ratchet mechanism

Locking levers

With their practical design, ergonomic features, they come in various sizes to cater to different needs. They are user-friendly with a comfortable grip and a ratchet mechanism. These levers are perfect for use on wheelchairs and walkers, where different parts often need to be adjusted, but also when space is limited. With a sleek and professional design, these levers make adjustments easy and secure.

And many more to choose from!

Washers and spacers

Be amazed by a variety of shapes, sizes, thicknesses and dimensions. Like with many of our molds, there are a number of insert molds, which means that the products easily can be obtained in many different variants. It's a standard product, but as a customized standard you can get it in any colour you want.
